

## In Search of Unknown Facts MP3 link

**Below is the text of what I say on the recording linked above, except for:**  
**1) that when I recorded this I of course made a few minor changes and-**  
**2) that as I add more items and references at the end of this list, I most likely WILL NOT be re-recording the MP3**

This is David getoff  
and this recording is regarding our society's HUGE abundance,--  
although it rarely gets recognized by those who exhibit it – of what  
could accurately be described as **Arrogant ignorance**.  
Much of it, but not all, could also go under the simple heading of  
**a severe deficiency of common sense**.

Let me explain.

Most people listening to this recording, unless your early education or  
your current memory are lacking, will have learned many of the  
following historical facts which by the way, are not in any  
chronological order.

- 1) Many ancient civilizations are thought to have believed the earth  
was flat or a large disc. When Ferdinand Magellan first sailed  
around the earth (generally referred to as circumnavigating the  
globe) this was proven to be false
- 2) Doctor, Ignaz Philipp Semmelweis, in 1847 proved that if  
physicians would wash their hands before delivering babies, the  
incidence of DEATH due to Puerperal fever, which varied from  
10-35% in various hospitals, could be decreased to below 1%,  
as otherwise they were carrying some as yet unknown disease  
causing agent from the corpses they had been working on, into  
the delivery area.

**The following excerpt is from one of our current dictionaries:**

“Semmelweis's observations conflicted with the established scientific  
and medical opinions of the time and his ideas were rejected by the  
medical community. Some doctors were offended at the suggestion  
that they should wash their hands and Semmelweis could offer no  
acceptable scientific explanation for his findings. Semmelweis's  
practice earned widespread acceptance only years after his death”.

Semmelweis was committed to an asylum, where he died at age 47 after being beaten by the guards.

Now of course, we know that the physicians unwashed hands were spreading what are now referred to as pathogenic or disease producing organisms such as bacteria

- 3 It was universally believed that **the Earth** was the center of the entire universe, and that the sun, moon and planets all revolved around the earth. In the 16<sup>th</sup> century, work by Copernicus, Galileo, and Kepler proved that this was not true.
- 4) Spontaneous generation was believed to be the reason that life could arise from nothing, such as the maggots which miraculously appear on aging dead meat. In 1859 Louis Pasteur scientifically proved this to be wrong
- 5) Heavier than air vehicles cannot possibly fly since they are heavier than air. Only lighter than air vehicles such as hot air balloons and blimps filled with hydrogen and later with helium would be able to fly. Thanks to the Wright brothers and other forward thinkers and inventors, we now fly in vehicles, propeller driven or jet airplanes, weighing many tons more than the same volume of air. Once again, the scientists consensus beliefs were wrong

There are many more examples I could give, but those few should convey my point, which is this:

A tiny group of people, or often even just a single individual figured out or believed something which was absolutely and completely different or even against, what everyone else, including the appropriate current experts or scientist thought was true.

Over time however, it was eventually proven that all these people and experts, - and often many published books, were in fact **WRONG** and this one “foolish idiot” was actually correct.

So now I have a very important question and I am directing my question to physicians, scientists, and the general public.

My question is:

**Which group do you aspire to be a part of?**

The large almost unanimous group who know they are right and that what you and they were originally taught, and what the majority currently believe,, will always remain correct?

Or might you rather be a part of the small and sometimes even tiny group who challenge your beliefs with other information which challenges or even contradicts all currently held mainstream beliefs.

The problem is that in many cases, your occupation, the respect of your colleagues, your ability to publish if you are a scientist, your job and therefore your income and ability to feed your family, and of course your overall reputation, all hinge on your NOT falling into this fringe - which are challenging the mainstream's accepted beliefs.

Personally, I aspire to learn, as soon as I possibly can, anytime that my beliefs and teachings have been shown to be WRONG – and to learn instead what the facts truly are. Without this desire, I will not be able to be the best person I can, and to be the best at what I do.

There is only one way to accomplish this lofty goal and I challenge my listeners to strive to accomplish this. It is a simple task that few professionals consider, and even fewer proceed to work towards.

Any time you hear something – which if it were true, would be very important for you to know and to change your existing beliefs – you must investigate it PROPERLY.

What is the proper way to do this investigation -- of absurd beliefs that you completely disagree with? It is quite simple. First, and the internet or the web should help a bit with this, you need to locate as many credentialed experts as you can, who share this peculiar belief, which completely disagrees with mainstream current ideas of what is true.

DO NOT contact anyone who shares the mainstream belief. You are ONLY looking for experts with proper credentials such as MD, PhD, professor, etc, who for some as yet unknown reason actually believe

this thing that you do not believe.

Now contact as many of them as you can and have them explain why they have changed their mind and no longer believe what most others still believe. After you have listened, with an open mind, to three or four of these experts, you can now make your own personal decision.

I will list a few examples of areas of knowledge, in which my beliefs, from extensive investigational research, have changed so that they are no longer in agreement with mainstreams beliefs

But first I will read a couple of my favorite quotations, which I feel do a fabulous job of representing this entire problem.

First we have:

What gets us into trouble is not what we don't know,  
it's what we know for sure that just ain't so.

Correctly attributed to Josh Billings (but incorrectly attributed to Mark Twain by Al Gore in his movie an inconvenient Truth as well as and all over the web)

Second we have a quote from Michael Chrichton who said:

Let's be clear: the work of science has nothing whatever to do with consensus. Consensus is the business of politics. Science, on the contrary, requires only one investigator who happens to be right, which means that he or she has results that are verifiable by reference to the real world. In science consensus is irrelevant. What is relevant is reproducible results. **The greatest scientists in history are great precisely because they broke with the consensus.** There is no such thing as consensus science. If it's consensus, it isn't science. If it's science, it isn't consensus. Period.

Third we have

**Epictetus** Greek born Roman Philosopher) (55 AD - 135 AD)

**"IT IS IMPOSSIBLE FOR ANYONE TO BEGIN TO LEARN WHAT HE THINKS HE ALREADY KNOWS."**

Last we have **Herbert Spencer** English philosopher  
(27 April 1820 – 8 December 1903)

**There is a principle which is a bar against all information,  
Which is proof against all arguments, and  
Which cannot fail to keep a man in everlasting ignorance.  
That principle is- contempt prior to investigation**

I would personally amend that to read contempt prior to **proper and adequate investigation** as this is my next quick area of recommendations

You see it is completely impossible to be a forward thinker, and to join the very small group who work to learn facts that have been accepted differently for year or decades, unless you make this one fairly simply change in the way you investigate new concepts and information. If you wish to join this small elite outsiders group, even though membership will not make you very popular, you need to no longer ask your friends, colleagues or professors for their opinions when one of these controversial issues is being investigated. You now need to ask only the experts who are on the side of this new belief that you do not share, as I outlined a few minutes ago.

Okay

Now you are ready to hear the areas of knowledge that I am currently listing which fall into this arena. I will add new ones as I think of them or come across them, or get emailed others that a reader thinks I should add to my list. They are not in any order so just choose one that would be important to you.

I will try to always put in a few experts names or books or videos for you to use in your search for the truth. Obviously the “mainstream” will consider all these experts to be fools, but I think that mainstream “experts” need to look in the mirror when they are calling someone a fool

Written below ***are some of the myths*** (or maybe we should call them lies?) which you need to investigate (unless you already know some of them are completely wrong and you are already in the minority but more knowledgeable group for that piece of knowledge)

- 1) Silver amalgam dental fillings are safe, and the 50-52% mercury that they contain, proven since the mid 1970's to be releasing into your body 24 hours a day, is not and will not cause you any harm.

Mercury Undercover DVD

also go to [www.IAOMT.org](http://www.IAOMT.org) and watch some of their 34 videos on mercury. Google Norwegian dental nurses documentary and see if you

can still watch the movie for free on line

- 2) Cholesterol is a harmful substance. Drugs such as statins should be used to keep your total cholesterol below 200 for improved health. Be careful not to let your total or LDL cholesterol get too high or your risk of heart disease goes way up. Eating chicken skin, beef fat, egg yolks, coconut oil and butter will cause heart disease due to their being saturated fats.

Many articles on my web page and some MP3's (more coming) also these web pages [www.SpaceDoc.net](http://www.SpaceDoc.net) And [www.THINCS.org](http://www.THINCS.org) And these books: Cholesterol Clarity by Jimmy Moore, The Cholesterol Myths by Uffe Ravnskov M D, PhD, The Statin Damage Crisis by Duane Graveline MD, Lipitor Thief of Memory by Duane Graveline, The Great cholesterol Myth. Or just search cholesterol books by Duane Graveline, Uffe Ravnskov, Joseph Mercola, Jimmy Moore, Sherry Rogers and other physicians and researchers who have examined this myth.

- 3) Adult and childhood vaccines have been properly researched and have been shown to be effective to do what they are claiming to do and have been proven safe and also have been proven not to cause developmental issues and autism in children

The experts are: Dr. Sherry Tenpenny, Dr. Gary Null, Dr Tim O'Shea, Dr. Vera Scheibner, Meryl Dorey, Dr Andrew Wakefield, and the National Vaccine Information Center. Books include: Vaccine Epidemic, Saying No To Vaccines by Sherri Tenpenny, Vaccination is Not Immunization By Tim O'Shea, Immunization the reality behind the myth by Wallene James, The Vaccine Safety Manual by Miller, Vaccination Roulette by Australian Vaccination Network, and Callous Disregard by Andrew Wakefield

- 4) Fluoride added to municipal drinking water has been proven to reduce tooth decay and has not been shown to be harmful to the public in ways such as increased hip fractures, increased cancer, and various emotional, neurological, and developmental problems in children and adults.

Movie DVD Fluoridegate

Many DVD's covering fluoride issues at [www.IAOMT.org](http://www.IAOMT.org) including Let the Truth Be Told Volume's 1 and 2 (and others)

**Books** Fluoride Deception by Christopher Bryson, The Case Against Fluoride by Paul Connett, and Fluoride the Aging Factor by John Yiamouyiannis

- 5) The events which occurred in New York City On September 11<sup>th</sup> 2001, often referred to as the World Trade Center attacks of 9/11, have been thoroughly investigated and it was determined that the planes which hit the twin towers and which were orchestrated by Al-Qaeda extremists, is why the towers came down and that the office fires in building 7 is why that 3<sup>rd</sup> world trade center building came down.

The best non fanatic information I have seen on this subject is from the Architects and Engineers for 9/11 truth and it on their web site at [www.AE911Truth.org](http://www.AE911Truth.org), I recommend you begin by viewing a copy of their documentary video entitled The Experts Speak as well as a few of their others. Watch these documentaries with some friends and have a discussion as to what you each think of the evidence the videos have presented.

- 6) GMO's (Genetically modified foods) have been shown to be safe and only fanatics are terrified about how many of them are already in our food supply and the damage they are causing and may cause

Movie DVD **Scientists Under Attack**

Movie DVD **Genetic Roulette** (and the book of the same title) by Jeffrey Smith

Movie DVD **A Silent Forest**

Movie DVD **The World According to Monsanto**

Movie **BT Cotton in Andhra Pradesh - A Three Year Fraud** if you can find a copy on line that has not been pulled off due to massive pressure, probably from Monsanto try this address

[www.cultureunplugged.com/play/6031/Bt-Cotton-in-Andhra-Pradesh--A-Three-Year-Fraud](http://www.cultureunplugged.com/play/6031/Bt-Cotton-in-Andhra-Pradesh--A-Three-Year-Fraud)

Movie **A Disaster in Search of Success - BT Cotton in Global South** try this address

**Book Seeds of Deception by Smith**

- 7) EMF's EMR electromagnetic frequencies and radiation from cell phones, cordless phones, WiFi, Smart Meters, and more have all been proven to be safe and the millions of people who believe otherwise are demented, psychiatrically ill, or conspiracy theorists.

Books: Cell phones by Dr. George Carlo, Zapped by Anne Louise Gittleman, The Invisible Disease by Nordstrom, Silent Fields & Dirty Electricity by Fisher, Web sites to look at:

[www.TheEmfSafetyNetwork.org](http://www.TheEmfSafetyNetwork.org), [www.StopSmartMeters.org](http://www.StopSmartMeters.org),

<http://www.bioinitiative.org>,

- 8) The United States is still a free country where you have freedom of speech, the right of privacy and due process under the law if you are

accused of something by a government official and will have your time in court and a jury of your peers. And also that capitalism is working as a healthy way to have a good government with a true democratic process.

If you believe that this is still true, I highly recommend that you read the books (or buy the audio books) entitled

1) The End of America, Letter of Warning to a Young Patriot by Naomi Wolfe and also her YouTube video

<http://www.youtube.com/watch?v=9f0sBA61L0Y>

2) The Shock Doctrine by Naomi Klein

You may be surprised at how many important things about our country you don't realize have been and are happening. We cannot try to change for the better, that which we don't know about.

3) Hacking Democracy a an HBO documentary about our voting machines and is important for you to watch. It used to be available for free to watch on both YouTube and on Hulu. First the YouTube one got pulled and now the Hulu one has been pulled. I guess some powerful people do not want the public to see this important documentary, so now you must purchase the DVD if you want to watch it. Please pass it around after you buy a copy from either <http://www.hackingdemocracy.com/> Or see if Amazon still carries it at a discount

- 9) Ozone is a harmful gaseous pollutant. It should never be breathed in any concentration and it should absolutely never be introduced in any manner into the human blood stream. Anyone who uses ozone generators to supposedly clean the air in their home is a fool and is harming their lungs and their skin. Anyone who uses medical ozone treatments for dental or whole body protocols is even more foolish. Ozone, a Medical Breakthrough? Is a documentary which is still available on YouTube for free <http://www.youtube.com/watch?v=jj6qBuNXumo> Another very good article on ozone is on my website at <http://www.naturopath4you.com/PDFs/Understanding%20ozone.pdf>
- 10) Gun ownership by the public is a bad thing, and it increases mass murder and senseless killings in schools and other public places. Making it more difficult for honest citizens to purchase firearms has been shown to reduce violent crime and these horrendous and awful

mass murder events. The statistics we are given by the media and government officials in this regard are accurate and undistorted. Best book may be **More Guns Less Crime** by John R. Lott and some of the PDF links here.
